LED Lights

LED lighting allows for complete energy efficient installations without compromising the quality of the light output or color temperature. Light emitting diodes (LED™s) use 75% less energy resulting in lower operating costs and a reduction of light pollution in the environment. LED™s also virtually eliminate voltage drop issues. LED Lighting also provides dramatically reduced operating costs, ultimate precision in lighting design and reduced costs in transformers required for the installation. The new LED will make the neighbors green with envy and the planet green with pride, reshaping the way you think about Pond Lighting.

1-Watt LED Waterfall Light
\$49.98
